Which physicians treat  
this disease?

- Interventional Radiologists
- Vascular Surgeons
- Interventional Cardiologists

9 Parker, Suite 100  
Irvine, CA 92618

**(877) 923-4747**

**InariMedical.com**

**Indications:** The ClotTrierer<sup>®</sup> Thrombectomy System is indicated for (1) the non-surgical removal of thrombi and emboli from blood vessels, and (2) Injection, infusion and/or aspiration of contrast media and other fluids into or from a blood vessel. The ClotTrierer<sup>®</sup> Thrombectomy System is intended for use in the peripheral vasculature including deep vein thrombosis (DVT).

**Caution:** Federal (USA) law restricts this device to sale by or on the order of a physician.  
See Instructions for Use for complete Indications for Use, contraindications, warnings, and precautions.

What you should know about  
**DEEP VEIN THROMBOSIS (DVT)**

# Deep Vein Thrombosis (DVT)

## What is the mechanism of DVT?

Deep vein thrombosis (DVT) occurs when a blood clot (thrombus) forms in one or more of the deep veins in your body, usually in your legs.

## What are the risk factors?

Blood clots can be caused by anything that prevents your blood from circulating or clotting normally, such as injury to a vein, surgery, certain medications, and limited movement.

## Risk of Pulmonary Embolism (PE):

DVTs may dislodge and travel through the venous system and heart to become lodged in the pulmonary arteries, posing risk of life-threatening complications.

## What are the symptoms of DVT?

- Leg pain, cramps, or swelling
- Skin discoloration
- A feeling of warmth in the affected leg

## What are the long-term implications?

If clot is left unresolved, patients can develop post thrombotic syndrome (PTS): a chronic, lifestyle limiting disease characterized by swelling, pressure, pain, and venous ulcers due to valve and vessel damage.

## What are treatment options?

- Anticoagulation (blood thinners):** Prevents new clot formation but does not actively break down existing clot.
- Thrombolytic drugs:** Dissolve acute clot but become ineffective as clot ages. Requires ICU monitoring. Are associated with higher risk of major and fatal bleeding.
- Mechanical Thrombectomy (ClotTriever®):** A catheter-based procedure for removing large volumes of clot from the deep veins. Rapidly restores blood flow without the use of thrombolytics.

# What is the ClotTriever®?

The ClotTriever® system is an FDA cleared mechanical thrombectomy device, designed specifically for removing large clots from large vessels to treat deep vein thrombosis (DVT) in a single session without the need for thrombolytics or ICU stay.

## Highlights

-  Immediate symptom relief
-  Treats in a single session
-  Eliminates the need for thrombolytics
-  Eliminates the need for ICU stay
